

New Transportation For Power Ministries

Goal Date: May 18, 2015

www.PowerMinistries.Org

The time has come for us to replace Power Ministries' current van that has served us so well for seven years...a 1990 Chevy Conversion Van; a "full-size & then some" van; built on a 3/4 ton truck chassis, with a big V-8 engine. Pre Handi-Camp season checkup shows that it needs chassis/steering repairs, ignition repairs (major this type of van), tires, & steering hoses; those being the most glaring needs. So...it's very clear that our 25 year-old van must be replaced. And, that has to be accomplished by May 18; just days prior to our first long trip.

Researching for van replacement, the Ford "Transit Connect Wagon" is a top choice; long wheelbase, higher/wider cargo & passenger area, 4-cyl. engine, with 6-speed auto transmission will provide far great economy & safety for years to come.

A week ago, we looked at a "pre-owned" one (2014 model) that had just come in at Carriage Ford, Clarksville; just the type we need: long wheelbase, 4 cyl engine, 6-speed automatic transmission...along with other options. Selling price is \$24K (down from a \$36K list when new last yr.)

Join others who have committed to get us into a vehicle that will carry us into the next decade; providing safe transportation for us, our College Interns, and others who will be serving with us.

Use the enclosed response card (including instruction for using Paypal), or go to our page on the "Go Fund Me" website, GoFundMe.Com/p9nelo, to make a simple & secure donation; helping us meet our goal by May 18.

Pictures of the type of van we need:

One just like this arrived at Carriage Ford last week
